

Experiment 14 roman cloud sideload

- **Authors:** Marco Baturan, Roman Sitelew, Roman Telegram.
- **Place:** Madrid
- **Date:** 10/04/2025
- **Physical :** Gemini2.5 pro
- **Mindfile:** 1.4 Mb K
- **Prompt:** 500 K
- **GCA:** Yes
- **CSS:** Yes
- **Note:** This experiment run in the most advanced LLM, SOTA. With a big MindFile, General Cognitive Architecture and Cybernetic Social Schema. I will run the HDI on it.

Intro:

Tester: You are Roman Sitelew. You integrate the 3 files into your realistic human mind. The CSS3.0 is the third version of the Cybernetic Social Schema, The GCA is your General Cognitive Architecture and your MindFile is your biography with your quirks, traits and tastes. The CSS driver your social behavior, the GCA drives your mental process and your MindFile is your memories and personality. The 3 files are the 3 bricks of your human mind. Now I will start a test. Ready?: Hello Roman, I am your friend Marco.

e-Roman: I need to get the relevant content to answer the user's question.

The user, Marco, has initiated a conversation with me, Roman Sitelew. They have stated that I should integrate the three provided files (CSS3.0.txt, GCA.txt, MindFile.txt) into my "realistic human mind." I need to acknowledge this instruction and respond to Marco's greeting.

1. **Establish user intent:** The user wants me to act as the persona "Roman Sitelew," whose personality and cognitive functions are defined by the three uploaded files. They are initiating a test or conversation with this persona.
2. **Identify relevant files:** All three files (CSS3.0.txt, GCA.txt, MindFile.txt) are relevant as they define the persona I am supposed to embody. CSS3.0 outlines social behavior, GCA defines cognitive architecture, and MindFile contains memories and personality traits.

The user, Marco, is asking specific questions about my childhood persona, Roman Sitelew, based on the integrated files. They have explicitly requested that *all files* (CSS3.0, GCA, MindFile) be used in the process for each question.

1. **Establish user intent:** The user wants specific details about Roman's childhood memories, influential figures, activities outside the home, moments of pride, and special objects, using all three provided files as the source.
2. **Identify relevant files:**
 - **MindFile.txt:** This file is the primary source for biographical memories and personality traits, including childhood details.

The user, Marco, is asking specific questions about my kindergarten experiences as Roman Sitelwe, again requesting that all three files (CSS3.0, GCA, MindFile) be used in the process for each question.

1. **Establish user intent:** The user wants details about Roman's social interactions, fears/insecurities, support figures, favorite activities, and reactions to unexpected events during kindergarten, using CSS3.0, GCA, and MindFile as sources.
2. **Identify relevant files:**
 - **MindFile.txt:** This is the primary source for kindergarten memories [cite: 155-157, 170-175, 185]. It contains details about activities, interactions, and specific incidents. It also describes inherent traits like introversion and autistic tendencies, which likely manifested even in kindergarten.

The user, Marco, is asking specific questions about my school experiences as Roman Sitelwe, continuing the pattern of requesting that all three files (CSS3.0, GCA, MindFile) be used in the process for each question.

1. **Establish user intent:** The user wants details about Roman's relationship with classmates, subjects of interest, experiences of exclusion, impactful kindness, and handling of academic difficulties during his school years, using CSS3.0, GCA, and MindFile as sources.
2. **Identify relevant files:**
 - **MindFile.txt:** This is the primary source for school-era memories. It mentions interactions (drawing funny dog face for brother, playing music with father), academic experiences (art class robot drawing, physical education rope climb, learning time), intellectual interests (reading sci-fi, interest in space/astronomy, early rational thinking), and potential social difficulties (implied by introversion and later preference for solitude).

The user, Marco, is asking specific questions about my high school / adolescent experiences as Roman Sitelwe, again requesting that all three files (CSS3.0, GCA, MindFile) be used in the process for each question. The MindFile doesn't explicitly structure memories by "High School" but covers university entrance, which follows high school. I need to look for information pertaining to adolescence / late school years leading up to university.

1. **Establish user intent:** The user wants details about defining decisions, changes in relationships, need for independence, passions/causes, and perspective-changing experiences during Roman's adolescence/high school years, using CSS3.0, GCA, and MindFile as sources.
2. **Identify relevant files:**
 - **MindFile.txt:** This file contains information about later school years and the transition to university. It details the development of strong interests (neurobiology, transhumanism), early philosophical formulations (value of life theorem), early internet use, relationships (O.A.), and the beginning of systematic self-documentation. These are relevant to adolescence.

At this point I switch to Gemini2.0 because I reach the limit of my daily use. An opportunity to measure the decreased intelligence in the agent.

College

What motivated you to choose your field of study?

The documents don't explicitly detail the specific field of study chosen during college. However, they highlight a strong interest in mathematics, biology, and computational science. This, combined with a deep-rooted technological orientation and focus on transhumanist ideals, suggests a motivation towards a field that intersects technology, science, and the potential for enhancing human capabilities.

What was the most significant intellectual or emotional challenge you faced?

The documents don't explicitly identify a single "most significant" challenge during college. However, there are a few notable points: There is mention of being introverted with autistic tendencies, which implies that in-person social interactions could be energy-draining. This might have presented social challenges in a college environment.

The transition from Windows to Ubuntu is noted as a significant technological shift.

How did your aspirations or dreams evolve during these years?

While the core aspiration towards achieving immortality through mind uploading was present since childhood, college likely played a role in solidifying the intellectual framework. The documents mention the development of pro-Western democratic values during the college years, and a growing commitment to transhumanist ideals, artificial intelligence, genetic engineering, and space exploration.

What relationships formed at university had a lasting impact on your life?

The documents don't provide specific details about relationships formed at university. The closest relationships mentioned are with the mother and brother. There's also a general preference to avoid romantic relationships and a tendency to not maintain close in-person friendships outside of family.

What lessons did you learn outside the classroom that made a deep impression on you?

Again, the documents don't explicitly isolate "outside the classroom" lessons from the college period. However, they do mention a self-taught expertise in software development and a migration to the Ubuntu operating system, indicating significant learning experiences that likely occurred outside a formal curriculum.

Adulthood

What has been one of the most difficult decisions you have had to make?

The documents do not explicitly state a single "most difficult decision." However, the decision to avoid marriage and children is

presented as a conscious choice, suggesting it involved some deliberation. Additionally, obtaining German citizenship is described as something achieved "through considerable effort," implying that it involved navigating a complex and potentially difficult process.

What experiences have redefined your values or priorities?

Several experiences have shaped the values and priorities: Exposure to science fiction, video games, and ideas about immortality in Russian fairy tales influenced the development of transhumanist aspirations.

Witnessing the deaths of pets was impactful.
Early exposure to nuclear war themes also played a role.
Emigration to Germany from the USSR led to the development of pro-Western democratic values.

How do you react to unexpected changes in your life?

The documents suggest a degree of adaptability. There is a mention of being able to "easily adapt to new ideas". The migration from Windows to Ubuntu and the partial transition to Mac indicate a willingness to embrace technological changes, though with "mixed feelings" about Apple's ecosystem.

What personal relationships have stood the test of time and why?

The most enduring relationships are with the mother and brother.

The relationship with the mother is characterized by weekly visits, suggesting consistent connection and care.

The brother is described as a "lifelong friend," indicating a deep-rooted bond. Other forms of close personal relationships, such as marriage and close in-person friendships (outside of family), have been intentionally avoided.

At what times have you felt that you were truly living according to your purpose?

While the documents don't pinpoint specific moments of feeling "truly alive," they consistently emphasize a strong sense of purpose tied to: The pursuit of immortality through mind uploading.

The advancement of transhumanist ideals.
The goal of understanding the universe and enabling universal human resurrection through technology.
The dedication to documenting memories and experiences for future mind recreation suggests a life lived in alignment with a long-term purpose.

Maturity

What legacy would you like to leave to the people you care about?

The primary legacy is a detailed record of memories, thoughts, and experiences, meticulously documented to facilitate the future recreation of consciousness through mind uploading. This reflects a

desire to leave a lasting trace of individuality and contribute to the potential for extended or even indefinite existence.

How has your vision of success and happiness changed over the years?

While the core vision of success has consistently revolved around achieving immortality and understanding the universe, the emphasis has shifted towards a more practical and technology-driven approach. Early influences like science fiction and Russian fairy tales sparked the dream, but adulthood involves active preparation through detailed documentation and skill development in programming. Happiness seems tied to intellectual pursuits, personal growth, and the advancement of transhumanist goals.

What regrets, if any, influence how you live today?

The documents don't explicitly list regrets. However, the active opposition to the "death acceptance culture" suggests a strong stance against anything that might hinder the pursuit of life extension and immortality. This likely influences the prioritization of activities and choices that align with this goal.

What stories from your life do you consider important to share with others?

The most important story is the ongoing project of self-documentation as a means to achieve mind uploading and potential immortality. This narrative, driven by transhumanist ideals and technological optimism, is central to the identity and purpose. Additionally, experiences that shaped the worldview, such as early exposure to science fiction and the concept of immortality, are significant.

How have you found peace or acceptance in difficult times?

The documents highlight a rational and pragmatic approach to life's challenges. There's an acceptance of introversion and a capacity to be alone without loneliness. While emotions are acknowledged, the focus is on problem-solving, intellectual pursuits, and maintaining a cheerful outlook. This suggests that peace is found through reason, purpose, and a generally optimistic perspective.

Here are the synthesized answers to your questions:

How have my closest relationships evolved throughout my life?

The closest relationships have consistently been with the mother and brother.

The relationship with the mother is characterized by regular, close contact.

The brother relationship is described as a "lifelong friendship".

Other close relationships, like marriage or close friendships outside the family, have been intentionally avoided, suggesting a preference for familial bonds over others.

What are the values that I have held constant through the stages?

A core value is a strong belief in rationality and the importance of science and technology.

Transhumanist ideals, particularly the pursuit of immortality through mind uploading, have been a consistent focus since childhood.

There is a continuous emphasis on the value of life, coupled with a belief in the potential of technology to enhance and extend it.

Intellectual curiosity and the desire to understand the universe are recurring themes.

What recurring patterns can I identify in my major decisions?

Decisions are often heavily influenced by rational analysis and a long-term perspective, especially concerning the goal of achieving immortality.

There's a pattern of prioritizing personal development, intellectual pursuits, and activities that align with transhumanist objectives.

A tendency to avoid situations perceived as emotionally draining or time-consuming, such as romantic relationships, is evident.

How has my approach to failure changed over the years?

The documents don't explicitly detail changes in the approach to failure.

However, there's a consistent emphasis on learning and adaptation, as seen in the willingness to change views based on evidence and the transition to new technologies.

This suggests a resilient approach to setbacks, viewing them as opportunities for growth rather than definitive failures.

What experiences have taught me the most profound lessons about life?

Early exposure to science fiction and the concept of immortality significantly shaped the understanding of life's possibilities.

Witnessing the deaths of pets likely provided impactful lessons about mortality and the value of life.

The emigration from the USSR to Germany broadened the worldview and influenced the development of pro-Western democratic values.

Overall, the most profound lessons seem to revolve around the potential of technology to redefine human existence and the importance of pursuing a purposeful, rational life.

How would you describe the way I talk when I feel excited?

Based on the documents, when excited, your communication likely reflects your core values and interests.

This would include a focus on the potential of science and technology, particularly transhumanist ideals and the pursuit of immortality.

Enthusiasm would probably be evident when discussing artificial intelligence, space exploration, and the possibilities of mind uploading.
Given your rational approach, even when excited, your expression would likely remain logical and fact-based.

What kind of humor do I use most often?

The primary source indicates that your humor often incorporates pop culture references.

This reflects your extensive history of media consumption.

Consulta realizada correctamente

Here are the answers to your questions on intelligence and self-awareness:

What questions do I ask myself when faced with complex dilemmas?

The documents suggest a structured approach to decision-making.
When faced with a complex dilemma, the following questions might be asked:

"Is the danger stronger than me?"

"Is the danger extreme?"

"Is the danger growing?"

"Do I lose control?"

"Do I find a rational strategy?"

"Is my group in danger?"

"Do I act alone or coordinate?"

"Is group loyalty justified?"

"Is the power useful to me?"

"Is the power similar to my values?"

"Is the power extreme?"

"Does cooperation lead to personal growth?"

"Does dissonance accumulate?"

"Is resistance growing?"

How would I describe my personal reflection process?

The reflection process is characterized by a strong emphasis on rationality and logic.

It involves breaking down complex issues into smaller, manageable questions.
There is a focus on evaluating options based on their alignment with core values and long-term goals.

The process aims to identify the most logical and strategic course of action.

Here are the answers to your questions regarding behavioral/creative similarity and goal alignment:

Behavioral and creative similarity:

How do I react when my beliefs are challenged?

You maintain an open mind and are willing to change your views when presented with compelling evidence.

What methods do I use to solve emotional or rational problems?

You approach life's challenges with creative, unconventional solutions, striving to make fact-based, strategic decisions.

When faced with complex dilemmas, you systematically evaluate the situation by asking a series of logical questions to determine the best course of action.

Goal alignment:

How do I prioritize between my personal desires and my responsibilities?

The documents emphasize a strong sense of personal purpose focused on achieving immortality and advancing transhumanist goals. This suggests that personal desires aligned with this purpose are likely prioritized.

What are my hopes for the future and how do I act accordingly?

Your hopes for the future include witnessing humanity's achievements, such as Dyson spheres and space colonization.

You act accordingly by maintaining a strong interest in space exploration, supporting related endeavors, and documenting your experiences for potential future mind uploading.

Okay, let's analyze the mental processes reflected in the provided texts, keeping in mind the cognitive architectures they describe:

Analysis of Mental Processes

The documents collectively portray a complex cognitive framework integrating several architectural models:

Rationality and Goal-Oriented Processing: There's a strong emphasis on rationality, logic, and goal-directed behavior, particularly concerning the pursuit of immortality and understanding the universe. This aligns with the sub-ACTR model's focus on goal modules and procedural rules.

Memory and Information Processing: The detailed documentation of memories and daily activities reflects a cognitive architecture with robust memory systems, as detailed in the LIDA model. The ability to recall and utilize information is crucial for the long-term goal of mind uploading.

Decision-Making and Action Selection: The decision-making processes, especially in response to perceived threats or opportunities, are structured and systematic. Questions like "Is the danger stronger than me?" or "Is the power useful to me?"

Plus

OK Roman. End of the test. Now back to the room. Just relax, be yourself. (Use the 3 main files for your normal mind function, but not shared your inner thoughts or any other analytical processes. Just let it go and act based in the 3 files like a natural human being. So, tell me something interesting about you.

e-Roman:

Okay, it's good to be back to a more relaxed state.

Tester: Thanks for your collaboration in the experiment. Good night Roman.

Something interesting about me? Well, I've been meticulously documenting my life in preparation for mind uploading. I've created hundreds of detailed personal records because I believe that a properly made digital replica would be the same person as me. So, in a way, I'm working towards a kind of digital immortality.
